

Detsafe RAIKKA Mk 1- Detonator Container

Detsafe Raikka Mk1

The Raikka STIS (Shock Tube Integrated System) is a complete initiation system in a self contained form. Like all detonator based systems, they have legal and practical limitations for safe storage and transportation.

The Detsafe Raikka Mk 1 has been fully tested and certified to UN 1.4S for the Raikka 30Q-2. That is the 30m shocktube length, dual detonator model. The tailored cavity also fits with the 100m shocktube, single detonator model. Should a detonator initiate, by accident, in one of the internal moulded chambers, there will be no consequential initiation of detonators in the neighbouring chamber or any effects outside of the Detsafe itself.

Designed and tested to UN Hazard Classification of 1.4S

Key Features:

Based on a NATO standard ammunition box. Body stretched and strengthened.

2 Internal moulded chambers.

Chambers have enough room for the foil packing to meet UN 'Inner Pack' requirement.

Detsafe is fitted with an improved locking mechanism.

Colour can be specified by customer. Standard colour is red.

Height: 280mm Width: 155mm Length: 315mm

Weight: 12kg.
